

Catalogue of rubber profiles 2026

Dear customers,

in the new catalogue for 2026 you will find, among other things, 525 new types of profiles, expanding our current range to more than 3070 items. Our company thus continues to maintain its position as a manufacturer of rubber profiles with the widest assortment in the Czech Republic. In case you don't find the required profile in our catalogue, we will be happy to make it to your request. A picture, a drawing or a small sample of the original profile will suffice. We can do all this in a few days with a minimum production batch of 1 kg, including the design and production of the extrusion nozzle directly by us. If you are not sure about anything, please don't hesitate to contact us for advice. Based on our many years of experience, we will recommend the appropriate type of profile and nozzle for your needs.

Ing. Martin Kománek, Executive Manager

KORDPLAST – rubber directly from the manufacturer

How can you order our profiles or rings?

Each of our profiles is tailor-made. Minimum production batch is 1 kg of profiles or rings.

Standard delivery date is approximately three weeks after placing the order, or as agreed.

Orders may be sent by email.

For new types of products or in case of larger quantities requested, we will be happy to prepare an individual price offer for you.

We deal in following activities:

Custom production of profiles and hoses.

Production is possible from one kilogram of the product. Based on drawings or simple schemes, we provide complete rubber-engineering production starting from elaboration of quotation, construction design of the extrusion mould, determination of technological process, production, technical inspection, packing to dispatching.

We produce our own extrusion moulds, which speeds up the delivery of finished products. We have modern equipment allowing production of any shape of the extrusion nozzle. We can produce profiles in dimensions that can be inscribed in a circle with a diameter of approximately 160 mm.

Manufacture of sealing for demanding applications.

We can give you advice for selection and we can suggest rubber resistant to chemicals, petrol, temperature, aging, etc. For this purpose we cooperate with leading Czech suppliers of rubber mixtures. In combination with electronically controlled vulcanization, maximum quality and homogeneity of rubber products are reached.

Dimensional accuracy and quality in accordance with norm ISO 3302-1. Priorities of our business always include customer satisfaction. This can be reached by strict observance of specified tolerances in each production stage.

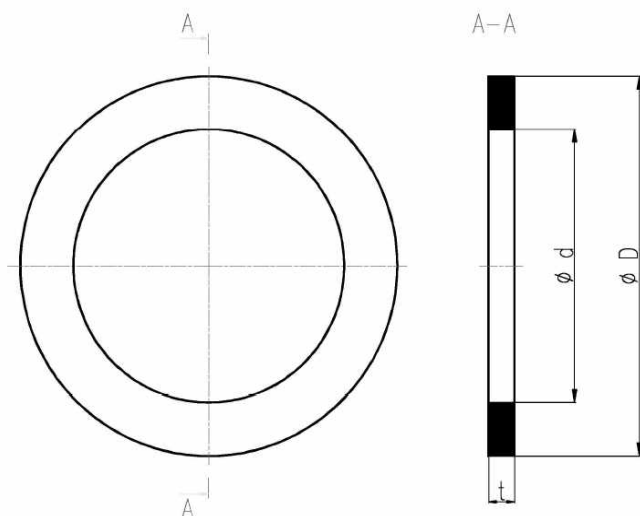

Washer cutting as required by the customer, shortening and gluing of profiles.

For washer cutting, we have new cutting equipment which can cut homogenous shapes of dimensions up to 60 x 60 mm and hardness of 80 ShA. We produce washers of simple shapes even in tens of pieces, while the price is kept significantly lower than for pressed products. We are able to shorten the profiles to any length, or glue them into closed loops with special flexible glues designed for rubber.

Cut-off rubber rings

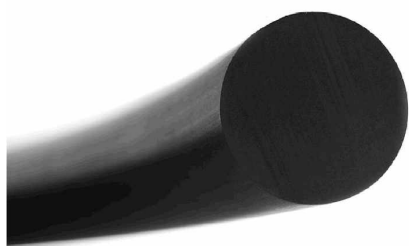

Ø D max. ≈ 115mm

Ø d min. = 2mm

t min. = 1mm

We produce cut-off rubber rings by cutting the manufactured hoses. Cross-section of the rings is rectangular. We are able to manufacture the rings in any size up to a dimension which can be included in the circle with diameter of 115 mm. We can produce glued rings above that dimension. This version is not limited in dimensions. Currently, we have portfolio of approximately 1200 types of rubber rings with various dimensions and used rubber. If a new rubber ring is manufacture it is not necessary to produce a new extrusion nozzle. Width of the cut-off rings starts from 1 mm; the upper dimension is not limited

Round profiles, hoses.

Round profiles or hoses can be also produced in any size up to dimension which can be included in the circle with diameter of approximately 115 mm. Similarly to the rings, production of round profiles is not connected with additional costs for extrusion nozzles.

Tolerance of rubber products.

Dimensional tolerance of our products is based on the effective standard ČSN ISO 3302-1. Rubber products are normally produced in accordance with tolerance classes E3, EN3, EG2. When required we can produce our products in more accurate tolerance classes, too.

Here you can see the selected tolerance classes.

Non-round full extruded profiles

Dimension		Class E1	Class E2	Class E3
From	To	Accurate	High quality	Standard quality
0	1,5	±0,15	±0,25	±0,4
1,5	2,5	±0,2	±0,35	±0,5
